

SMOKE-PEN Testing Smoke Detection Systems

FEATURES

- ✓ Easy to use
- ✓ Simplifies system smoke tests
- ✓ Ensures continuous and consistent smoke trail
- ✓ Refillable wicks

PRODUCT DESCRIPTION

The Smoke Pen simplifies Aspirating Smoke Detection (ASD) system testing by providing a user-friendly design that generates a continuous smoke trail. Using refillable wicks, the device works like a mechanical pencil; where a wick can be inserted into the pen, leaving a 10mm trace that can subsequently be ignited by either a lighter or match. The patented design of the wick ensures a continuous and consistent smoke trail, helping simplify ASD system smoke testing. Once smoke testing has been completed, smoke can be quickly extinguished by replacing the smoke pen lid, leaving the wick ready for re-use at a later date. The Smoke Pen comes with 6 replacement wicks, and a separate refill pack is available as a spare part.

DIRECTIONS FOR USE

1. Leave approx 10mm protruding out of the end of the Smoke Pen (10mm equates to 2-3 minutes of burn time).
2. Light the top of the smoke stick and allow to burn with an open flame.
3. After 10-15 seconds of burn time, blow out flame. The smoke pen will now release a stable and smooth smoke string.
4. To turn off the smoke pen, place Hot Cap over burning stick. The smoke pen will go out almost immediately.
5. To re-light the Smoke pen, repeat above steps.
