

FEATURES

- ✓ Fully programmable control from 2800 panel
- ✓ 16 touch pad buttons (momentary or latch on/off)
- ✓ 16 red LEDs and 16 yellow LEDs
- ✓ Lamp Test

IDEAL FOR

- ✓ Zone isolation/control
- ✓ Solenoid Test
- ✓ Isolation
- ✓ Ancillary Controls

PRODUCT DESCRIPTION

The 2800-ACM-16AT Annunciator Module connects to the AFP-2800 RS485 communication ring and can be mounted internally or externally from the panel.

The touch pad switches may be set in banks of 8 to either “toggle on/toggle off” or momentary modes.

This module is ideal to use for zone isolation and display. Each button is assigned a zone isolate function and the red and amber LED displays the alarm status for that zone.

The 16AT can also be used for a variety of ancillary controls including Solenoid valve test buttons and/or ancillary controls/displays.

Slide-in paper labels make custom labelling simple and neat.

Up to 99 annunciators can be installed per communications ring.

TECHNICAL SPECIFICATIONS

Operating Voltage	18 - 27Vdc
Current Consumption	100mA max
Communications	RS485
Addresses	1 - 99
