Product designation

VESDA®, aspirated smoke detector system

(Refer to the Schedule/enclosures for further specified details)

Agent/distributor

Xtralis Pty Ltd

4 North Drive, Virginia Park, 236-262 East Boundary Road, BENTLEIGH EAST, VIC, AUSTRALIA, 3165

Registrant

Xtralis Pty Ltd

4 North Drive, Virginia Park, 236-262 East Boundary Road, BENTLEIGH EAST, VIC, AUSTRALIA, 3165

Producer

Xtralis Ptv I td

4 North Drive, Virginia Park, 236-262 East Boundary Road, BENTLEIGH EAST, VIC, AUSTRALIA, 3165

Conformance criteria and evaluation

The VESDA®, aspirated smoke detector system has been evaluated and verified as conforming with the relevant requirements of the following criteria.

1. Australian Standard AS 1603.8-1996, 'Automatic fire detection and alarm systems - Multipoint aspirated smoke detectors'.

Limitations/conditions of conformance

Limitations/conditions of conformance, where identified on this certificate, are derived from qualifications from evaluation(s) for conformity and/or other related technical documentation. All details with respect to design, assembly and installation instructions and restrictions should be checked against the producer's current technical manual/data sheets and the requirements of the Authority having Jurisdiction.

Specified limitations/conditions, determined from the evaluation for conformity, include the following.

- i. The components are to be installed in accordance with the manufacturer's instructions contained in the System Design Manual and subsequent addendums and amendments.
- ii. The power source meets the requirements of the power supply specifications contained in the Installation Guide.

(Limitations/conditions of conformance continue)

This certification is issued within the scope of CSIRO Verification Services – Rules governing ActivFire Scheme and is valid only for the product(s) as submitted for evaluation and verification of conformity, subject to the following conditions

- Reference to details, limitations and requirements, where documented as a schedule/enclosure with this certificate.
- The Registrant is responsible for their attestation of conformity and ensuring that on-going production complies with the conformance criteria defined in this certificate.
- This certificate will not be valid if any changes or modifications are made to the product which have not been notified and validated by CSIRO Verification Services.
- This certificate is subject to periodical re-validation upon verification that all requirements, as determined by the conformity assessment body, continue to be satisfactorily met by the Registrant.
- This certificate may only be reproduced in its published form, without modification and inclusive of all schedules/enclosures.
- Any changes, errors or omissions, must be submitted in writing and if necessary or requested, substantiated with relevant evidence.
- Any representations, such as advertising or other marketing related activities or articles shall reflect the correct contents of this certificate and conform with all relevant trade practices and consumer protection legislation and regulations.
- Any terms or conditions of use as applicable to content and documentation as published or accessed through web sites administered by the CSIRO Verification Services.

Issued by

David Whittaker

Executive Officer – ActivFire Scheme

Certificate of Conformity

Certificate num.	Registration date	Version		Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 2 of 26

- iii. The Vision Systems VESDA® LaserPLUS™ Model VPS-101 Single Zone Intelligent Power Supply (with VESDA*net*);
 - can only be installed with a shielded VESDA*net* cable Belden type 9841 (or equivalent) as specified in the cabling chapter of the VESDA® LaserPLUS™ System Design Manual V2.2.
 - can only be installed adjacent to fault relay monitoring equipment and also adjacent to equipment being powered by 24 volts as the 24 volt power line and fault signal line were not tested in the frequency range 0.15-100 MHz.

Producer's description

The VESDA® Aspirated Smoke Detector System consists of the following components:

Model num.	Description
VLP-002	LaserPLUS™ Aspirated Smoke Detector

Model VLP-002

Model VLP-012, LaserPLUS™ Aspirated Smoke Detector

Model VLP-100 Model VLP-400 Model VLP-401

The VESDA® LaserPLUS™, Model VLP-012 Aspirated and smoke detector is modular designed, active smoke detection system that sample air from a fire zone for the presence of smoke. Air samples are drawn to the detector head from a sampling pipe network using an aspirator. The sampling pipe network consists of a series of PVC 25 mm OD pipes with sampling points and an end-cap.

A display module provides a visual representation of the smoke levels and alarms detected by the detector. The detector supports four levels of alarm, each of which is indicated by a high intensity red light and an audible sounder. These lights flash until acknowledged by a key-press, whereupon they become steady and the sounder is silenced. Detector faults and systems faults are indicated on the display by the flashing of appropriate amber lights and the sounding of an alarm. A numerical display is provided to indicate the Fire 1 alarm threshold, smoke level (in %Obs/m), and the zone number of the detector. The default setting for the display is the Smoke Level. A twenty (20) segment bargraph indicates the current level of detected smoke. The scaling of the bargraph is dynamic in that Fire 1 threshold always corresponds to the top bargraph light. The Action and Alert levels are scaled proportionally.

Buttons are provided in the display module front panel to check but not configure the system functions. These buttons can be configured as lock-out to prevent unauthorised operation. The Mode/Test button either switches the numerical display

Certificate of Conformity

Certificate num.	Registration date	Version		Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 3 of 26

reading or activates the test mode. The Silence button will silence any alarm or fault beeps sounding from the display and any flashing alarm or fault LEDs will change to a steady illuminated condition. The Reset button will reset any alarm or fault conditions and return relays to their normal state. Any beepers or flashing lights will be turned off. The Isolate button isolates the zone from external devices. An Isolate indicator light will illuminate and a reminder beep will sound.

The LCD Programmer module allows the user to adjust the alarm thresholds, smoke confirmation delay times and relay configuration of the modules in the VESDA® LaserPLUS™ system. Access is PIN protected. A list of programmable functions is shown in the Supplementary Information. The VESDA® LaserPLUS™ aspirating smoke detector is powered from an external dc source that can vary between 18 Vdc and 30 Vdc. Guidance is provided by the manufacturer on the selection of wire size depending on source voltage and length of wire. The VESDA® LaserPLUS™ aspirating smoke detectors are not claimed to be waterproof.

Model VLS-100

Model VLS-204

Model VLS-214, FD (Four Detector), LaserPLUS™ Scanner Aspirated Smoke Detector

Model VLS-304

Model VLS-314, FD (Four Detector), LaserPLUS™ Scanner Aspirated Smoke Detector

Model VLS-500

Model VLS-600

Model VLS-601

Model VLS-700

The display module provides a visual representation of the smoke levels, scanning action, the first alarm sector (FAS) and any alarms detected by the detector. Detector faults and systems faults are indicated on the display by the flashing of appropriate amber lights and the sounding of an alarm.

A numerical display is provided to indicate the Fire 1 alarm threshold, smoke level (in %Obs/m), the zone number, the scanning function (Sc), and either the first alarm sector (FAS) or highest alarm sector (HAS) of the detector. If an alarm has been detected the FAS is displayed. The numeric display will indicate the (HAS) if this sector is different from the FAS. The commencement of the rapid scanning function is displayed as Sc. A twenty (20) segment bargraph indicates the current level of detected smoke. The scaling of the bargraph is dynamic in that Fire 1 threshold always corresponds to the top bargraph light. The Action and Alert levels are scaled proportionally. The default setting for the display is the Smoke Level.

Buttons are provided in the display module front panel to check but not configure the system functions. The Mode/Test button either switches the numerical display reading or activates the test mode. The Silence button will silence any alarm or fault beeps sounding from the display and any flashing alarm or fault LEDs will change to a steady illuminated condition, or if held depressed for longer than 2 seconds will initiate a manual scan operation. The Reset button will reset any alarm or fault conditions and return relays to their normal state. Any beepers or flashing lights will be turned off. The Isolate button isolates the zone from external devices. An Isolate indicator light will illuminate and a reminder beep will sound.

The LCD Programmer module allows the user to adjust the alarm thresholds, smoke confirmation delay times and relay configuration of the modules in the VESDA® LaserPLUS™ system. Access is PIN protected. A list of programmable functions is provided in Appendix C of the VESDA® System Design Manual. If a user is not logged on to the LCD Programmer, the display will automatically provide a textual scanner status screen when a scan cycle commences. A typical textual display is shown in Figure 1.

	Zone 01 Basement →					
	Alarm	Level				
PI	None	0.034 %/m				
P2	Alert	0.056 %/m				
Р3	Fire 1	1.154 %/m				
P4	Action	0.083 %/m				
Firs	t Alarm Sector	P3				
	Scanning		Login			

Scanner status screen

A detailed description of the LCD Programmer and its functions can be can be found in the VESDA® System Design Manual.

Certificate of Conformity

Certificate num.	Registration date	Version		Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 4 of 26

A twelve (12) relay termination card, LPV-PCA-021 -OOA, is supported by the detector and display. The FD Scanner software will support the original seven (7) relay termination card but only when configured for that type of relay termination card. The default configuration for the seven (7) and twelve (12) relay cards is shown in the following table.

Relay No.	7 Relay Termination Card	12 Relay Termination Card
1	Isolate	Isolate
2	Minor fault (normally energised)	Minor fault (normally energised)
3	Urgent fault (normally energised)	Urgent fault (normally energised)
4	Alert (any sector)	Alert (any sector)
5	Action (any sector)	Action (any sector)
6	Fire 1 (any sector)	Fire 1 (any sector)
7	Fire 2 (any sector)	Fire 2 (any sector)
8	-	FAS Sector 1
9	-	FAS Sector 2
10	-	FAS Sector 3
11	-	FAS Sector 4
12	-	Scanning

Default relay configuration table

The VESDA® LaserPLUS™ model VLS-314 FD Scanner is powered from an external dc source that can vary between 18 Vdc and 30 Vdc. Guidance is provided by the manufacturer on the selection of wire size depending on source voltage and length of wire.

The VESDA® LaserPLUS™ model VLS-314 FD Scanner is not claimed to be waterproof.

Comparison table:

Feature / Function	VLP-012 Detector	VLS-214 VLS-314 FD (Four Detector) Scanner
Aspirated Smoke Detection	Yes	Yes
Standard Laser Chamber Detector	Yes	Yes
Smoke Sensitivity	0.005 to 20% obscuration/m	0.005 to 20% obscuration/m
Area covered	2000 m ²	2000 m ²
Number of Pipe Inlets	4	4
Pipe ID	19 to 25mm (preferred OD 25mm)	1 9 to 25mm (preferred OD 25mm)
Can measure smoke level per pipe	No	Yes
Automatic Fortnightly Valve Test	No	Yes
Standard Aspirator	Yes	Yes
Standard Filter Module	Yes	Yes
Modelling Tool Used	ASPIRE	ASPIRE
Supply Voltage	18 - 30 Vdc	18 - 30 Vdc

VRT-200 Remote Display with Relays

VRT-400 Remote Scanner Display with Relays

The VESDA® LaserPLUS™ model VRT-200 remote and model VRT-400 remote scanner display with relays are a duplication of the display modules normally mounted in the VESDA® LaserPLUS™ aspirated and scanner aspirated detectors. The VESDA® LaserPLUS™ remote displays with relays are mounted in a metal case with a remote termination card that provides interconnection for supply power and VESDAnet.

The remote displays can be programmed to monitor a single detector using either the programmer or a PC. The model VRT-200 remote display will only monitor the detector in a non scanning model VESDA® LaserPLUS™ aspirating detector. A display can only monitor one (1) detector.

VRT-100 Remote Programmer

The VESDA® LaserPLUS™ model VRT-100 remote programmer is a duplication of the programmer module mounted in the VESDA® LaserPLUS™ detector. The VESDA® LaserPLUS™ remote programmer is mounted in a metal case with a remote termination card without relays that provides interconnection for supply power and VESDA*net*. The remote programmer can be used to monitor the status of all components connected in the VESDA*net* loop.

Note: In the VRT-100 remote programmer, the relays are not provided, and hence no relay outputs are supported in the remote programmer.

VRT-300 Remote VESDAnet Socket

The VESDA® LaserPLUS™ model VRT-300 remote VESDA*net* socket has a fifteen (15) pin high density female `D' type connector mounted in a blank plate. This socket is a duplicate of the socket mounted on the head termination card, LPV-PCA-010-00, in the VLP-012 aspirating detector. A Hand held programmer or PC-Link HLI can be connected to the VESDA*net* via the socket. The `D' socket provides a nominal 24 Vdc power supply and VESDA*net* connections to the hand held programmer or PC-Link HLI.

VHH-100 Hand held programmer

The VESDA® LaserPLUS™ model VHH-100 hand held programmer is a portable device which provides the same functionality as that of the programmer module mounted in the VESDA® LaserPLUS™ detector. It physically consists of a programmer interface card, LPV-PCB-014-00, and a programmer processor card, LPV-PCB-009-00A. Connection to the VESDA*net* is made through a cable connecting the fifteen (15) pin high density male `D' type connector to the fifteen (15) pin high density female 'D' type in the remote VESDA*net* socket or the head termination card, LPV-PCA-010-00, in the VLP-012 aspirating

Certificate of Conformity

Certificate num.	Registration date	Version		Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 6 of 26

detector. The female `D' socket provides a nominal 24 Vdc power supply and VESDA*net* connections to the hand held programmer.

VSR-0231 19" sub-rack

The VESDA® LaserPLUS™ model VSR-0231 19 inch sub-rack is a configured example of a mounting facility for a maximum combination of four (4) modules consisting of display(s), programmer, VESDA*net* socket, and blank plate(s). The Rack unit consists of the 19 inch sub-rack, a rear shield, and a 19 inch rack mounting. The termination cards and front modules are mounted as required.

VHX-0100 PC-Link HLI

The VESDA® LaserPLUS™ VHX-0100 PC-Link HLI is an interface between the female 'D' socket of a VLP-012 aspirating detector, or remote VESDAnet socket and a PC. The VESDA® LaserPLUS™ VHX-0100 PC-Link HLI requires two cables to effect communication between the PC and the VESDA® LaserPLUS™ network. It enables communication with modules over the VESDAnet by using a variety of VESDA® LaserPLUS™ PC software.

VPS-101 Single Zone Intelligent Power Supply (with VESDAnet)

The Vision Systems VESDA® LaserPLUS™ Model VPS-101 Single Zone Intelligent Power Supply (with VESDAnet) is a single-zone 24 Vdc power supply referenced to mains earth potential and capable of providing power with battery backup and temperature compensated charging for a single LaserPLUS™ detector head fitted with display and programmer. The VESDA® LaserPLUS™ Model VPS-101 power supply has the added ability to supply low voltage power to other devices on the system and has built in diagnostic and fault reporting functions which include a fault indicator and fault relay output. The Vision Systems VESDA® LaserPLUS™ Model VPS-101 Single Zone Intelligent Power Supply (with VESDAnet) is also provided with a VESDAnet communications interface which reports detectable fault conditions and status information to the intelligent devices powered by it.

VLC-505 (VN) LaserCOMPACT™ Detector

VLC-500 (RO) LaserCOMPACT™ Detector

The LaserCOMPACT™ is made up of two parts. The main enclosure houses all the key components of the detector. All non-serviceable items like the main processor board and detector chamber are mounted away from the general access area, protecting them during installation and service. The main enclosure includes:

- The Laser Detection Chamber,
- Main processing board with integrated flow sensor,
- Single-port entry with air flow monitoring,
- Termination card supporting three relays

Fire, Pre-Alarm, Alert / Fault (including service and isolate)

Power and connections and VESDAnet communication connection on VN version

- LaserCOMPACT™ aspirator
- Dual stage filter cartridge
- · Exhaust port.

The front cover supports five LEDs, Fire, Pre-Alarm/Alert, Fault, Reset/Isolate. The Reset/Isolate push button operates as a press to reset and press and hold to isolate.

	7	Scanner Display with RTCO (no relays)								
	8	Scanner Display with RTC12								
	9	RTC12 & DRP only (12-relays only)								

Notes:

RTC is the Remote Termination Card

DRP is the Display & Relay Processor Card

Items marked in brackets eg. [Custom] are proposed and not yet available.

- Eg. VRT-40000-G00 is a Scanner Display with relays (7-relay RTC) configured for normal mounting, Generic English.
- Eg. VRT-10000-G00 is a Programmer without relays configured for normal mounting, Generic English.
- Eg. VRT-10001-G00 is a Programmer without relays configured for normal mounting, Generic English, with some customer specific customised features.
- Eg. VRT-51000-G00 is a remote relay box (12-relay RTC) with relays
- Eg. VRT-000 is an empty remote box with cover, but no blank plate (truncated version)

Although the remote mounting box can only be ordered in normal orientation ONLY, inverted orientation is available at the time of installation, since cover must be removed to install mounting box. The recess mounted kit is available as Part No. VSP-01200-G00.

- Eg. VRT-400 is a Scanner Display with relays (7-relay RTC) configured for normal mounting, Generic English. (truncated format)
- Eg. VRT-210 is a Display with relays (12-relay RTC) configured for normal mounting, Generic English. (truncated format)

Notes:

Definitions as follows:

RTC = Relay Termination Card

RTCO = Relay Termination Card with no relays fitted

RTC7 = 7-Relay Relay Termination Card RTC12 = 12-Relay Relay Termination Card

ORP = Display & Relay Processor Card

Sharing = Module in this position shares adjacent RTC by daisy-chain connection (if possible).

Use of any kind of RTC (RTC0, RTC7 and RTC12) requires connection to DRP either by itself or part of Display or Scanner Display. The DRP provides the intelligence & VESDAnet addressing.

Items marked in brackets eg. [Custom] are proposed and not yet available.

Certificate of Conformity

Certificate num.	Registration date	Ve	ersion	Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 13 of 26

The 19" sub-rack can be fitted with 4 modules. The left most is position 1, & the right most is position 4.

Eg. VSR-01260-G00 is a 19" sub rack fitted with Blank plate in position 1, Programmer in position 2, Display with relays in position 3, and Display without relays in position 4, all with Generic English display coding.

Eg. VSR-0126 is a 19" sub rack fitted with Blank plate in position 1, Programmer in position 2, Display with relays in position 3, and Display without relays in position 4, all with Generic English display coding. (truncated format)

Notes:

Items marked in brackets eg. [Custom] are proposed an not yet available

Eg. VLC-100 is an EMC2 OEM variant of the LaserCOMPACT™ Detector

Eg. VLC-50000-G00 is a LaserCOMPACT Detector, Relays only outputs, set up for Generic English.

The mounting options are normal mounted or inverted mounted.

The LaserCOMPACT™ recessed mounting kit is available as part VSP-010

Eg. VLC-505 is a LaserCOMPACT™ Detector, with VESDAnet interface, and set up for Generic English. (truncated format)

Eg. VLC-90001-133 is an E700R variant of the LaserCOMPACT™ Detector, with customisation as specified in Variations Specifications #133.

Notes:

Items marked in brackets eg. [VesdaCAD] are proposed and not yet available.

- Eg. VSW-00100-G00 is ASPIRE for DOS software, Generic English (latest version).
- Eg. VSW-00732-G00 is a Special custom VSM III software package number 32, Generic English.
- Eg. VSW-00500-G00 is a Downloader software package, Generic English.
- Eg. VSW-00501-G00 is a VConfig Pro (Win-95) package number 01, Generic English.
- Eg. VSW-002 is ASPIRE for Win-95/3.11 software, Generic English (latest version, truncated format).
- Eg. VSW-00200-B is ASPIRE for Win-95/3.11 software (Beta version), Generic English (latest version).
- Eg. VSW-00700-A is VSM III for Win-95 (Alpha version) software, Generic English (latest version).
- 11. Truncating

Where specialised or customised VLP components are not required the variation MAY be omitted. Fields which may be truncated MUST have their default value or zero and lie between Field 8 and Field 13. Specification of fields 1 through 7 is mandatory.

For example:

VLP-012 is translated as VLP-01200-G00 VLP-01200 is also translated as VLP-01200-G00

VLP-0121 is translated at the generic version inverted

VLP-01201 is a standard unit with specific instructions FOR THIS ORDER ONLY

VLP-01200-B03 is a customised version with specific badging

VLP-01201-B03 is the same customised version with additional requirements

VPS-101 is a standard PSL i.e. VPS-10100-G00

VRT-201 is the standard remote display - VRT-20100-G00

VSP-011 is the LaserPLUS™ Recess Mounting Kit ie. VSP-01100-G00

12. Software version

The software version refers to the Version and update number for VESDAnet. This number consists of three parts, the major and minor numbers, and the patch level. In general two LaserPLUS™ units linked together with differing minor numbers will operate without error. Two LaserPLUS™ units linked together with differing major numbers will generate a system fault.

Schedule to Certificate of Conformity

Certificate num.	Registration date	Ve	rsion	Valid until	
afp - 1083	23-May-1997	Number 16	Issue date 26-Apr-2019	30-Apr-2020	Page 16 of 26

Software version is always represented as three groups of 2 digit numbers separated by dots:

<2 major number digits>.<2 minor number digits>.<2 patch level digits>

Manufacturer's system specifications:

The following information is extracted from Vision Systems Products Division marketing specification document: - VESDA® LaserPLUS™ Product Numbering Specification MKT-SPC-003-00

BUNDLE NUMBERS

The bundle number represents the physical configuration of a LaserPLUS™ product. It does <u>not</u> include the software (VESDA*net*) version information in this release.

		RTC0 (no relays)					3	<not used=""></not>		
	2	Display with RTC7								
	3	Socket plate								
	4	Scanner Display with RTC7								
	5	RTC7 & DRP only (7- relays only)								
	6	Display with RTC0 (no relays)								
	7	Scanner Display with RTC0 (no relays)								
	8	Scanner Display with RTC12								
	9	RTC12 & DRP only (12- relays only)	-							

- RTC is the Remote Termination Card
- DRP is the Display & Relay Processor Card
- Items marked in brackets eg. [Custom] are proposed and not yet available.
- Eg. VRT-40000-G00 is a Scanner Display with relays (7-relay RTC) configured for normal mounting, Generic English.
- Eg. VRT-10000-G00 is a Programmer without relays configured for normal mounting, Generic English.
- Eg. VRT-10001-G00 is a Programmer without relays configured for normal mounting, Generic English, with some customer specific customised features.
- Eg. VRT-51000-G00 is a remote relay box (12-relay RTC) with relays
- Eg. VRT-000 is an empty remote box with cover, but no blank plate (truncated version)
- Although the remote mounting box can only be ordered in normal orientation ONLY, inverted orientation is available at
 the time of installation, since cover must be removed to install mounting box. The recess mounted kit is available as Part
 No. VSP-01200-G00.
- Eg. VRT-400 is a Scanner Display with relays (7-relay RTC) configured for normal mounting, Generic English. (truncated format)
- Eg. VRT-210 is a Display with relays (12-relay RTC) configured for normal mounting, Generic English. (truncated format)

- Definitions as follows:
- RTC = Relay Termination Card
- RTCO = Relay Termination Card with no relays fitted
- RTC7 = 7-Relay Relay Termination Card
- RTC12 = 12-Relay Relay Termination Card
- DRP = Display & Relay Processor Card
- Sharing = Module in this position shares adjacent RTC by daisy-chain connection (if possible).
- Use of any kind of RTC (RTCO, RTC7 and RTC12) requires connection to DRP either by itself or part of Display or Scanner Display. The DRP provides the intelligence & VESDAnet addressing.
- Items marked in brackets eg. [Custom] are proposed and not yet available.
- The 19" sub-rack can be fitted with 4 modules. The left most is position 1, & the right most is position 4.
- Eg. VSR-01260-G00 is a 19" sub rack fitted with Blank plate in position 1, Programmer in position 2, Display with relays in position 3, and Display without relays in position 4, all with Generic English display coding.
- Eg. VSR-0126 is a 19" sub rack fitted with Blank plate in position 1, Programmer in position 2, Display with relays in position 3, and Display without relays in position 4, all with Generic English display coding. (truncated format)

	900	E700R 2000 m ²						

Notes:

Items marked in brackets eg. [Custom] are proposed an not yet available

Eg. VLC-100 is an EMC² OEM variant of the LaserCOMPACT™ Detector

Eg. VLC-50000-G00 is a LaserCOMPACT Detector, Relays only outputs, set up for Generic English.

The mounting options are normal mounted or inverted mounted.

The LaserCOMPACT™ recessed mounting kit is available as part VSP-010

Eg. VLC-505 is a LaserCOMPACT™ Detector, with VESDAnet interface, and set up for Generic English. (truncated format)

Eg. VLC-90001-133 is an E700R variant of the LaserCOMPACT™ Detector, with customisation as specified in Variations Specifications #133.

Notes:

Items marked in brackets eg. [VesdaCAD] are proposed and not yet available.

- Eg. VSW-00100-G00 is ASPIRE for DOS software, Generic English (latest version).
- Eg. VSW-00732-G00 is a Special custom VSM III software package number 32, Generic English.
- Eg. VSW-00500-G00 is a Downloader software package, Generic English.
- Eg. VSW-00501-G00 is a VConfig Pro (Win-95) package number 01, Generic English.
- Eg. VSW-002 is ASPIRE for Win-95/3.11 software, Generic English (latest version, truncated format).
- Eg. VSW-00200-B is ASPIRE for Win-95/3.11 software (Beta version), Generic English (latest version).
- Eg. VSW-00700-A is VSM III for Win-95 (Alpha version) software, Generic English (latest version).

11. Truncating

Where specialised or customised VLP components are not required the variation MAY be omitted. Fields which may be truncated MUST have their default value or zero and lie between Field 8 and Field 13. Specification of fields 1 through 7 is mandatory.

For example:

VLP-012 is translated as VLP-01200-G00 VLP-01200 is also translated as VLP-01200-G00

VLP-0121 is translated at the generic version inverted

VLP-01201 is a standard unit with specific instructions FOR THIS ORDER ONLY

VLP-01200-B03 is a customised version with specific badging

VLP-01201-B03 is the same customised version with additional requirements

VPS-101 is a standard PSL i.e. VPS-10100-G00

VRT-201 is the standard remote display - VRT-20100-G00

VSP-011 is the LaserPLUS™ Recess Mounting Kit ie. VSP-01100-G00

12. Software version

The software version refers to the Version and update number for VESDA*net*. This number consists of three parts, the major and minor numbers, and the patch level. In general two LaserPLUS™ units linked together with differing minor numbers will operate without error. Two LaserPLUS™ units linked together with differing major numbers will generate a system fault.

Software version is always represented as three groups of 2 digit numbers separated by dots:
